

SMARTBRIDGE PROJECT

Implement Client Script & UI Policy (Incident)

PHASE 1

Phase 1 - Brainstorming & Ideation

Technology Track: ServiceNow Administrator

Team Leader: M. Mohamed Akmal

Team Members:

E. Kaviyaran

D. Lingeshwaran

K. Karuppaiyah

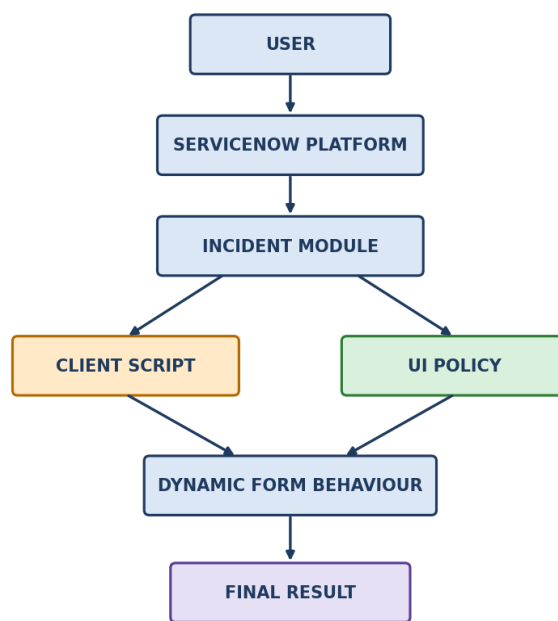

1. Project Introduction

This project focuses on implementing Client Script and UI Policy functionality on the ServiceNow Incident form. The objective is to configure dynamic behaviour on the Incident form according to the requirements provided for the project.

2. Problem Identification

Incident forms contain multiple fields and configurations. Applying appropriate client-side behaviour and UI policies can help control the form dynamically and provide a more structured experience for users.

3. Proposed Solution

Implement Client Script & UI Policy (Incident)

The Incident form uses a **Client Script** for dynamic client-side behaviour and a **UI Policy** for field/form behaviour, together producing the final result.

4. Team Members and Responsibilities

Member	Role	Responsibility
M. Mohamed Akmal	Team Leader	Team coordination, GitHub, integration, final demo
E. Kaviyaran	Member	ServiceNow Client Script implementation
D. Lingeshwaran	Member	Testing and validation
K. Karupaiyah	Member	UI Policy and documentation

Note: The exact Client Script logic, UI Policy conditions, fields and expected behaviour must be taken from the SmartBridge Project Document and Reference Video. Fields marked in square brackets are placeholders to be filled from that document.
