

SMARTBRIDGE PROJECT

# Implement Client Script & UI Policy (Incident)

## PHASE 3

Phase 3 - System Design

**Technology Track:** ServiceNow Administrator

**Team Leader:** M. Mohamed Akmal

**Team Members:**

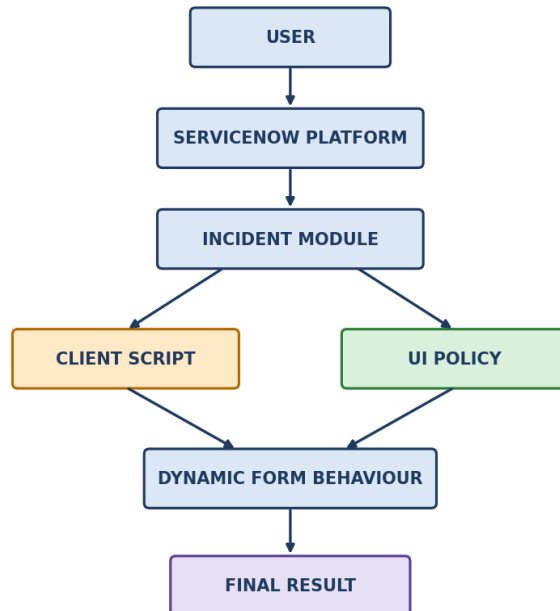

E. Kaviyaran

D. Lingeshwaran

K. Karuppaiyah

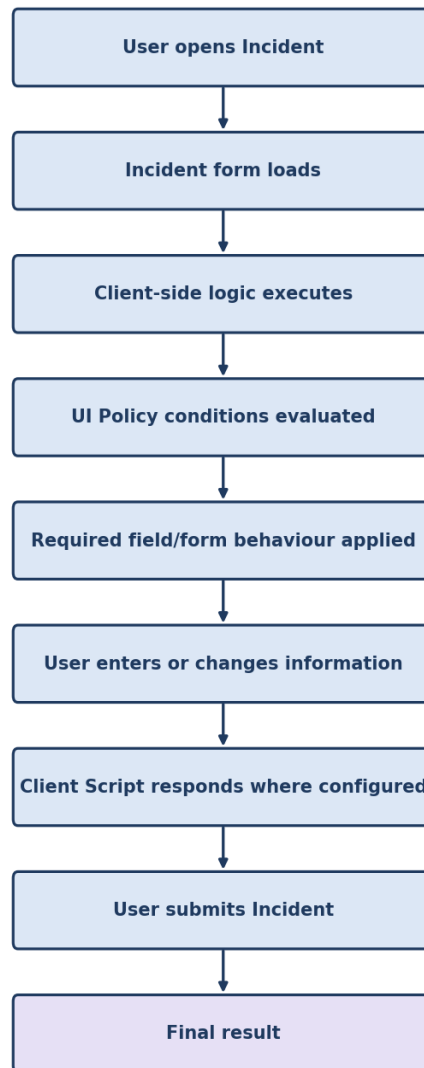

# 1. Conceptual System Architecture

The user accesses the ServiceNow platform and opens the Incident module. On the Incident form, the Client Script and UI Policy work together to produce dynamic form behaviour and the final result.

*Implement Client Script & UI Policy (Incident)*

## 2. Workflow

**Note:** Modify this workflow according to the exact SmartBridge project requirements if they specify a different flow.

## 3. Design Components

| Component     | Role                                                                                       |
|---------------|--------------------------------------------------------------------------------------------|
| Incident form | Table/form where the behaviour is applied                                                  |
| Client Script | Runs in the browser on form events (onLoad, onChange, onSubmit) to respond to user actions |
| UI Policy     | Condition-based rules that make fields mandatory, read-only or visible/hidden              |
