2. Certificate / Declaration

We hereby declare that the project titled **Implement Client Script & UI Policy (Incident)** is our original work carried out as part of the SmartBridge ServiceNow programme (ServiceNow Administrator track).

Team Leader signature: _____

Date: _____

3. Team Members

Member	Role	Responsibility
M. Mohamed Akmal	Team Leader	Team coordination, GitHub, integration, final demo
E. Kaviyaran	Member	ServiceNow Client Script implementation
D. Lingeshwaran	Member	Testing and validation
K. Karuppaiyah	Member	UI Policy and documentation

4. Abstract

This project implements Client Script and UI Policy functionality on the ServiceNow Incident form to deliver dynamic, structured form behaviour as per the SmartBridge project requirements. The solution was configured, tested and documented by the team.

5. Introduction

ServiceNow is a cloud platform for IT service management. The Incident module records and tracks service disruptions. Client Scripts and UI Policies allow administrators to control forms in the user's browser without changing server logic.

6. Problem Statement

Incident forms contain many fields. Without client-side control, users may skip important fields or see irrelevant ones, leading to incomplete or inconsistent records.

7. Objectives

- Implement the required Client Script functionality
- Implement the required UI Policy functionality
- Demonstrate dynamic Incident form behaviour
- Test the configured functionality
- Document the complete development process

8. Existing Approach

The standard Incident form is used as-is, relying on users to enter data correctly with no dynamic client-side control.

9. Proposed Solution

Add a Client Script and UI Policy to the Incident form so that the form responds dynamically to conditions and user input.

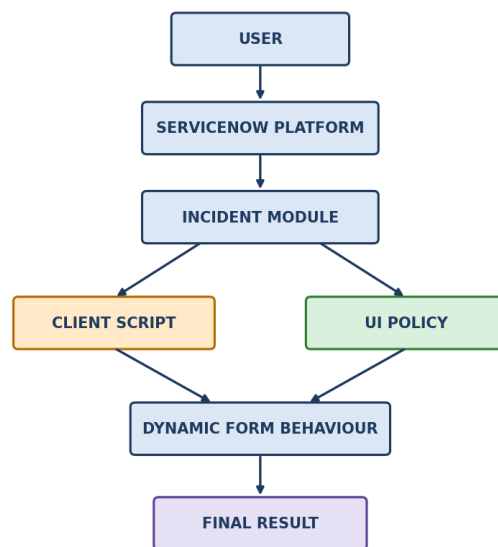

10. Requirements

Hardware: laptop/desktop, internet connection. **Software:** web browser, ServiceNow instance, GitHub, Word/Google Docs, PDF reader. Functional requirements FR-01 to FR-04: [Add exact details from the SmartBridge Project Document].

11. Technologies Used

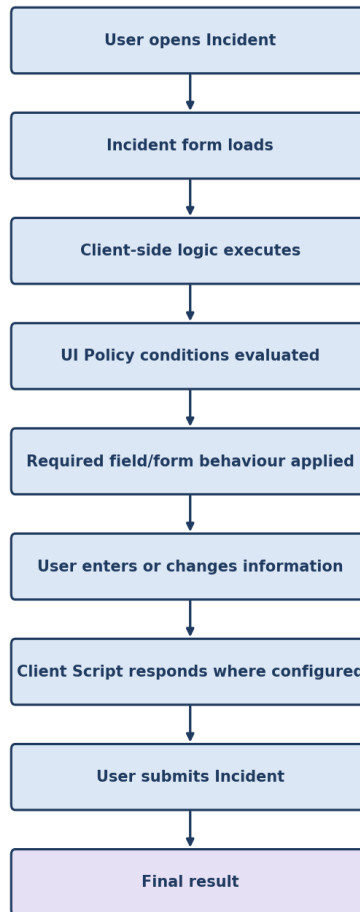

- ServiceNow (Incident module)
- Client Script
- UI Policy
- GitHub

12. System Design

Implement Client Script & UI Policy (Incident)

13. Workflow

14. Client Script Implementation

A Client Script runs in the user's browser on events such as onLoad, onChange, onSubmit and onCellEdit. Configuration recorded here: Name, Table (Incident), UI Type, Type, Field name, Script.

```
function onChange(control, oldValue, newValue, isLoading, isTemplate) {  
    // [Add exact details from the SmartBridge Project Document]  
}
```

15. UI Policy Implementation

A UI Policy applies conditions (Filter Conditions) and UI Policy Actions to fields, such as Mandatory, Visible and Read-only. Record the short description, table, conditions and actions: [Add exact details from the SmartBridge Project Document].

16. Screenshots

See Phase 5 Development Report and the Screenshots/ folder (01 to 09).

17. Testing

Functional test cases were prepared and executed by D. Lingeswaran (see Test-Cases.xlsx).

18. Test Results

Summarise PASS/FAIL results from Test-Report.pdf here.

19. Results and Discussion

Describe the observed Incident form behaviour and compare it with the requirements.

20. Advantages

- Improves data quality on Incident records
- No server-side changes required
- Faster, more guided user experience
- Easy to configure and maintain

21. Limitations

- Client-side logic can be bypassed by non-browser inputs (imports, APIs)
- Behaviour is limited to the configured conditions

22. Future Enhancements

- Add Data Policies for server-side enforcement
- Extend to Change and Problem forms
- Add more conditions and validations

23. Conclusion

The project demonstrates the implementation and testing of Client Script and UI Policy functionality on the ServiceNow Incident form according to the assigned project requirements.

24. References

- SmartBridge Project Document and Reference Video
- ServiceNow Documentation: docs.servicenow.com
- ServiceNow Developer Site: developer.servicenow.com

Note: The exact Client Script logic, UI Policy conditions, fields and expected behaviour must be taken from the SmartBridge Project Document and Reference Video. Fields marked in square brackets are placeholders to be filled from that document.
